20 September 1984

ISRAEL: Alternative Economic Policies

25X1

Summary

[redacted] we ran two scenarios to measure the impact of various policies on Israel's economic performance. Sharply constraining domestic demand would dramatically improve the civilian goods and services deficit compared with current trends, but investment would suffer.

25X1

25X1

* * * * *

Scenario 6. In this scenario, we assumed real wages decline 5 percent annually in 1985-86 and 3 percent in 1987 and there is a one-time decrease of 7.5 percent in domestic military and non-military spending in 1985 and no growth in 1986-87. Economic growth falls from an annual average of 3.1 percent in the baseline to 1.9 percent, and the unemployment rate increases to 9.6 percent in 1987. Private consumption declines 2 percentage points compared with the baseline, and investment declines at an average annual rate of 8.7 percent compared with a fall of 5.6 percent in the baseline. The civilian goods and services deficit in 1987 is \$4.9 billion compared with \$5.6 billion in the baseline.

25X1

25X1

This memorandum was prepared by [redacted] the Israel/Palestinian Branch, Arab-Israeli Division, Office of Near Eastern and South Asian Analysis. It was requested by Russell Misheloff, Deputy Director, Office of Middle East and European Affairs, AID, [redacted]

25X1

25X1

[redacted] Information as of 20 September 1984 was used in its preparation. Questions and comments should be directed to Chief, Arab-Israeli Division, [redacted]

25X1

Scenario 7. This scenario combines Scenario 6 with an increase in the value-added tax of 5 percentage points in 1985-87. Under this scenario, the economy slows down even more. GNP growth averages only 1.5 percent a year, and the average annual rate of consumption and investment is 1.8 and 3.1 percentage points, respectively, below the baseline. The civilian goods and services deficit in 1987 is \$4.7 billion, but unemployment reaches 9.9 percent in 1987. [redacted]
